Summary

Computer Science and Engineering undergraduate (CGPA 7.74) with hands-on experience shipping full-stack web applications using React.js, Node.js, Java, and relational databases. Delivered a production onboarding platform serving 120+ candidate records during a four-month software engineering internship, and architected a blockchain-based evidence-custody system using Solidity smart contracts, IPFS, and SHA256 integrity verification. Seeking a Software Engineer role building scalable, secure, user-facing systems.

Technical Skills

Languages: Java, Python, JavaScript, C, SQL, Solidity

Frontend: React.js, HTML5, CSS3, Responsive Web Design, DOM Manipulation

Backend & APIs: Node.js, Express.js, REST APIs, JWT Authentication, Server-Side Validation

Databases: MySQL, PostgreSQL, Schema Design, Query Optimization, Normalization, Indexing

Blockchain: Ethereum, Solidity Smart Contracts, IPFS, SHA-256 Hashing, Web3.js

Tools & Practices: Git, GitHub, VS Code, Postman, Agile/Scrum, Code Review, Debugging

CS Fundamentals: Data Structures & Algorithms, Object-Oriented Programming, DBMS, Operating Systems, Computer Networks, Cryptography & Network Security, Cybersecurity

Experience

Ankyah Nexus

Jan 2026 – Apr 2026

Software Development Intern

Mysore, Karnataka

- **Engineered** a web-based Onboarding Management System that cut manual intern and freelancer onboarding from **3 hours to under 45 minutes per cohort (a 75% reduction)** across **120+** candidate records, by building responsive React.js registration workflows backed by a normalized MySQL schema.
- **Owned** the document-management module handling **300+** secure file uploads across **3** distinct access roles, reducing onboarding dataentry errors by **40%** through layered client-side and server-side validation.
- **Automated** the candidate registration-to-approval pipeline, eliminating **5** manual handoff steps per candidate, by implementing statusdriven state transitions and a real-time administrative tracking dashboard.
- **Collaborated** in an Agile team using Git feature branches and pull-request code review, shipping **8** features across **6** two-week sprints with zero regressions in production onboarding flows.

Projects

Chain of Custody — Digital Forensic Locker | Solidity, Ethereum, IPFS, React.js, Node.js

Apr 2026 – Present

- **Architected** a tamper-evident digital-evidence custody platform achieving **100%** integrity verification across **200+** test evidence artifacts, by anchoring SHA-256 content hashes to Solidity smart contracts on the Ethereum network.
- **Optimized** storage economics by offloading full evidence payloads to IPFS while persisting only **46-byte** content identifiers on-chain, **reducing per-transaction gas cost by over 90%** versus naive on-chain file storage.
- **Implemented** an append-only, cryptographically chained audit trail capturing every custody transfer, reducing evidence-provenance reconstruction from **2 hours** of manual log review to **under 3 seconds** via indexed smart-contract event queries.
- **Built** the investigator-facing React.js dashboard for evidence upload, hash verification, and custody-history visualization, enabling nontechnical forensic staff to validate artifact integrity in **3 clicks**.

Education

Mangalore Institute of Technology & Engineering

2023 – 2027

B.E., Computer Science & Engineering (IoT, Cybersecurity & Blockchain Technology) — CGPA: 7.74/10

Moodbidri, Karnataka

Rotary PU College

2021 – 2023

Certifications & Training

- **Frontend Web Developer: Modern HTML, CSS & JavaScript** — Udemy, 2025 | **RPA Developer Foundation (v2021.10)** — UiPath, 2025
- **Real-Time Operating Systems** — NPTEL, 2025 | **Internet Crimes and Cyber Security** — NPTEL, 2026
- **Workshops:** IoT with Analytics: Prototyping & Design (2025); Ethical Hacking (2025) — Mangalore Institute of Technology & Engineering
